

PG&E Quarterly Update
Monthly Consumption by ZIP Code
Data Documentation Notes

This monthly consumption report is provided quarterly and applies the following data aggregation rules, pursuant to CPUC Decision 14-05-016:

- Usage data is aggregated monthly by customer class (Residential, Commercial, Industrial, or Agricultural) and grouped by ZIP Code.
- Usage is only provided if ZIP Codes meet the standards for aggregating and anonymizing customer data pursuant to California Public Utilities Commission Decision 14-05-016:
 - For Residential customers, the ZIP Code must have 100 or more residential customers in any month.
 - For Commercial, Industrial or Agricultural customers, the “15/15 Rule” will be applied at a ZIP Code level in any month.

As an example, for Commercial customers, a ZIP Code must have 15 or more Commercial customers, with no single Commercial customer’s usage constituting more than 15% of the total consumption in any month for that ZIP Code.

- If ZIP Codes do not meet these aggregation standards, the usage of those ZIP Codes will be combined with the usage of other ZIP Codes until the aggregation standards are met.

Note: Data reported for this quarter was refreshed and posted in January 2017.
